**Presentation title:**

DEICERS AND ANTI-ICERS COMPARATIVE STUDY

**Other Authors**

MARS Benoit, STAC, France, benoit.mars@aviation-civile.gouv.fr

**Summary:**

Chloride sodium is the most commonly used deicer (more than 99% of the total consumption) on the French road network. Different substitution products have been appearing on the market as an alternative to NaCl: de-icers and anti-icers used on airports, industrial formulations, or mixture of abrasive and de-icers.
