Resumen (en Inglés):

Until around 1960, the avalanches, which cut the transportation routes, did not pose a particular problem, because the inhabitants moved little during the winter. Then the population exploded (doubling every 10 years) and Andorra opened more and more with winter tourism. New ski stations came out. Good winter viability became essential. Two studies of road protection had indeed been carried out before 1984, but no structure had been built or installed. The reason was the Arcalis road. Three long-term parallel actions were led by request of the Andorran Government:
