Presentation title:

LASTING OF SALT ON RURAL ROADS IN GERMANY

Other Authors

Roos, Ralf, Karlsruhe Institute of Technology (KIT)-Institute of Highway and Railroad Engineering (ISE), Germany, ise@ise.kit.edu

Summary:

Sodium chloride is the most common de-icing agent used for winter maintenance operations. In Germany, usually prewetted salt (70 % rock salt and 30 % salt solution) is used. Sometimes, depending on availability of technology, pure salt solution is used, especially for presalting operations.
