Presentation title:

THE EFFECT OF CRASH BARRIER ON THE SNOW DEPOSITS OF HIGHWAYS

Other Authors

Samodurova Tatiana, Voronezh State University of Architecture and Civil Engineering, D. Sc. in Engineering, Professor of Department of Roads and Bridges Designing, Russian Federation, samodurova@vgasu.vrn.ru

Summary:

The modern highways have several lines of crash barrier on the entire road to ensure traffic safety. However, in the winter, this leads to the fact that all roads embankment which are not protected from snow blizzard with forests, are blocked by snow. Thus, the crash barrier is a structure that contributes to the snow accumulation on the road during blizzards.
